inserted in antisense orientation relative to the transcriptional orientation of the gene to be trapped. The other DNA segment (selection cassette) is inserted in sense direction relative to the transcriptional orientation of the gene to be trapped. The cell comprising the gene trapping construct is useful for the identification and/or isolation of genes. The transgenic organism comprising the gene trapping construct is useful to study gene function at various developmental stages. The gene genes. The present is useful for mutationally inactivating all cellular vector is transfected into a murine cell along with the test vector pRK65 is used for the expression of phiC31 integrase to detect C31-Int (a phiC31 phage derived integrase) mediated inversion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  capable of causing conditional mutations in genes. The gene trapping construct comprises two functional DNA segments, each being flanked by two recombinase recognition seems (RRSS) specific to site specific recombinase which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates which is capable of uncess (RRSS) specific to site specific recombinates (RRSS) specific recombinates (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  standard
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a conditional gene trapping construct capable of causing conditional mutations in genes. The gene trapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       recombinase which is capable of unidirectional inversion of double standard DNA segment. One of the DNA segment (disruption cassette)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New gene trapping construct capable of causing conditional mutations in genes, comprises functional DNA segment inserted in sense or antisense direction relative to gene to be trapped .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2001-308486/32.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 2; Page 61-63;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                         CC recombinases. The method comprises transforming cells with a first CC plasmid comprising two recombination sites and a coding sequence of cc interest, and a second plasmid encoding an altered recombinase; allowing recombination of the two recombination sites using the altered recombinase; screening and isolating transformed cells comprising the CC recombinase; The altered recombinase is useful for site-specifically critically a polynucleotide sequence of interest in a genome of a cell. CI is also useful in genetic engineering of chromosomes of higher cells. CC and for the generation of transgenic cells, tissues, plants and animals. CC e.g. ADA deficiency, cystic fibrosis, familial-hypercholesterolaemia, anemia, chronic granulomatous disease, buchenne's muscular dystrophy, hammophilia, Fanconi's disease, sickle-cell anemia, Gaucher's disease, finited severe combined immunodeficiency (SCID), infectious diseases including viral and bacterial infections, acquired clicorders including viral and bacterial infections, acquired clicorders including viral and bacterial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinase; genetic engineering; monogenic disorder; ADA deficienc cystic fibrosis; familial-hypercholesterolaemia; haemophilia; chronic granulomatous disease; Duchenne's muscular dystrophy; Fanconi's disease; anemia; sickle-cell anemia; Gaucher's disease; Hunter's syndrome; X-linked severe combined immunodeficiency; SCID;
            disorders including solid tumours and haematopoietic cancers such leukaemias and lymphomas, and other cancers. The present sequence encodes a wild type bacteriophage thetaC31 integrase.
                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying altered recombinase, involves hybridizing recombination sites in cells having specific coding sequence, transformed with altered recombinase gene, and isolating cells having product of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
              recombinases. The method comprises transforming cells with a first plasmid comprising two recombination sites and a coding sequence of interest, and a second plasmid encoding an altered recombinase; allowing recombination of the two recombination sites using the altered recombinase; screening and isolating transformed cells comprising the product of the sequence of interest; and identifying the altered recombinase. The altered recombinase is useful for site-specifically integrating a polynucleotide sequence of interest in a genome of a cell. It is also useful in genetic engineering of chromosomes of higher cells, and for the generation of transgenic cells, tissues, plants and animals. The altered recombinase is useful for treating monogenic disorders, e.g. AbA deficiency, cystic fibrosis, familial-hypercholesterolaemia, anemia, chronic granulomatous disease, Duchenne's muscular dystrophy, anemia, chronic granulomatous disease, Duchenne's muscular dystrophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying altered recombinase, involves hybridizing recombination sites in cells having specific coding sequence, transformed with stered recombinase gene, and isolating cells having product of the

CC The specification describes a method for identifying altered combinases. The method comprises transforming cells with a first CC plasmid comprising two recombination sites and a coding sequence of interest, and a second plasmid encoding an altered recombinase; allowing crecombination of the two recombination sites using the altered cc product of the sequence of interest; and identifying the altered cc product of the sequence of interest; and identifying the altered cc product of the sequence of interest; and identifying the altered cc product of the sequence of interest; and identifying the altered cc product of the sequence of interest in a genome of a cell. It is also useful in genetic engineering of chromosomes of higher cells, and for the generation of transgenic cells, tissues, plants and animals. CC e.g. ADA deficiency, cystic fibrosis, familial-hypercholesterolaemia, canemia, chronic granulomatous disease, Duchenne's muscular dystrophy, haemophilia, Fanconi's disease, sickle-cell anemia, Gaucher's siseases, cluders's syndrome and X-linked severe combined immunodeficiency (SCID), confectious diseases including viral and bacterial infections, acquired clisvaters and lymphomas, and other cancers. The present sequence cc encodes an altered recombinase of the invention.

The method comprises transforming cells with a first CC plasmid comprising two recombination sites and a coding sequence of CC interest, and a second plasmid encoding an altered recombinase; allowing CC recombination of the two recombination sites using the altered CC recombinates screening and isolating transformed cells comprising the CC product of the sequence of interest; and identifying the altered CC recombinase. The altered recombinase is useful for site-specifically integrating a polynucleotide sequence of interest in a genome of a cell. It is also useful in genetic engineering of chromosomes of higher cells, and for the generation of transgenic cells, tissues, plants and animals. CC and for the generation of transgenic cells, tissues, plants and animals. CC e.g. ADA deficiency, cystic fibrosis, familial-hypercholesterolaemia, CC anemia, chronic granulomatous disease, buchenne's muscular dystrophy, CC haemophilia, Fanconi's disease, sickle-cell anemia, Gaucher's disease, infectious diseases including viral and bacterial infections, acquired CC disorders including solid tumours and haematopoietic cancers such as CC leukaemias and lymphomas, and other cancers. The present sequence CC encodes an altered recombinase of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAD19829
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAD19829 standard; DNA;
         invention relates to Cestrum yellow leaf curling virus (CMYLCV) novel sequences which functions as transcription promoters of an associated ynucleotide sequence. These CMYLCV DNA molecules confers constitutive ression of associated polynucleotide sequences. The invention also
                                                                                                                                                                                     Ŧ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to Cestrum yellow leaf curling virus (CmYLCV) novel DNA sequences which functions as transcription promoters of an associated polynucleotide sequence. These CmYLCV DNA molecules confers constitutive expression of associated polynucleotide sequences. The invention also relates to recombinant DNA sequences containing promoter sequences which are used for creating transgenic plants expressing DNA of interest at all times and in most tissues and organs. The present DNA sequence is a promoter-reporter cassette which contains CmYLCV CmpC promoter fragment, green fluorescent protein-1 synGFP1 reporter gene and the Agrobacterium tumefaciens nopaline synthase (NOS) terminator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expression of associated polynucleotide sequences. The invention also relates to recombinant DNA sequences containing promoter sequences which are used for creating transgenic plants expressing DNA of interest at all times and in most tissues and organs. The present DNA sequence is a promoter-reporter cassette which contains CnYLCV CmpS promoter fragment, green fluorescent protein-1 synGFP1 reporter gene and the Agrobacterium tumefaciens nopaline synthase (NOS) terminator. Promoter-reporter cassette is used to construct plant transformation vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to Cestrum yellow leaf curling virus (CMYLCV) novel DNA sequences which functions as transcription promoters of an associated polynucleotide sequence. These CMYLCV DNA molecules confers constitutive expression of associated polynucleotide sequences. The invention also relates to recombinant DNA sequences containing promoter sequences which

These CmYLCV DNA molecules confers constitutive expression of associated polynucleotide sequences. The invention also relates to recombinant DNA sequences containing promoter sequences which are used for creating transgenic plants expressing DNA of interest at all times and in most tissues and organs. The present DNA sequence is beta-glucuronidase (GUS) reporter gene with ST-LSI intron sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            27-MAR-2000;

targeting an associated protein of interest to plastids. A nucleic acid which expresses polypeptide having ilpoxygenase activity is useful for inhibiting fungal mycotoxins when transformed into a plant. The lipoxygenase is useful for inhibiting fungal mycotoxins. The promoter is useful for regulating transcription of a chemically inducible but not wound or pathogen inducible gene, which involves applying a chemical regulator to a plant or seed containing a chemically regulatable nucleotide sequence. Transgenic plants as described above are useful for preeding improved plant lines that for example increase the effectiveness of conventional methods such as herbicide or pesticide treatment or allow to dispense with improved stress tolerance can be obtained that, due to their optimised genetic equipment yield harvested product of better contails.
                                                                                                                  quality than products that were not able to tolerate comparable adverse developmental conditions. The present sequence is the glutathione-Stransferase (GUS) sequence (containing an intron from solanum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated nucleic acid encoding a promoter which is capable of driving chemically inducible but not wound- or pathogen-inducible expression of an associated nucleotide sequence -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo. NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library and the transfer to the strain the library of the strain strain the library of the strain strain strain strain section of the library and both the confidence the section of the library and the strain section of the library and the strain section is section.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TCAGGTTCGTCGGGCATTTCAGCGAAGCGCCGGGCACGTCGGCGTTCGGGACGGCGGAGC

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton oroject grant. The Nas been constructed in the vector

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Drosophila melanogaster

The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library. Or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information
